Browsing Genes and Genomes with Ensembl

Ben Moore

Ensembl Outreach

EMBL-EBI

UC Irvine - 31st October 2022

Structure

Presentation:

What the data/tool is

How we produce/process the data

Demo:

Getting the data
Using the tool

Follow along if
you want to

Exercises:

Available on the EBI Train Online website
Trying things out for yourself
Going beyond the demo

<http://training.ensembl.org/events>

Course materials

training.ensembl.org

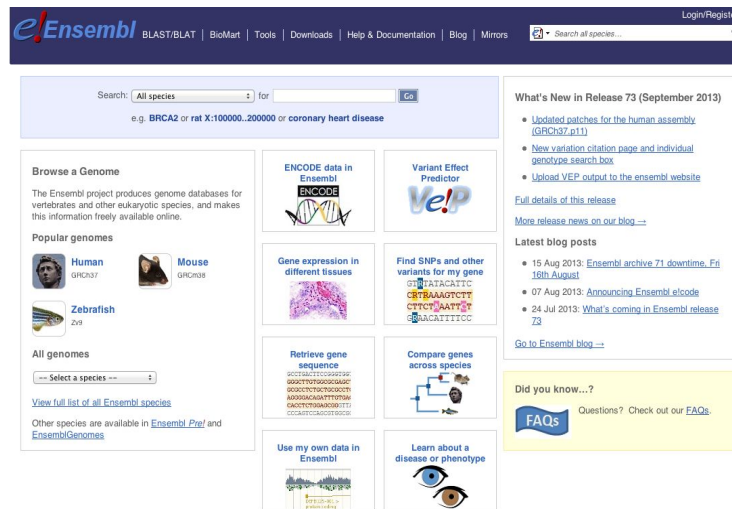

- Presentations
- Demonstrations
- Exercises and answers
- Living Document

<http://training.ensembl.org/events>

Objectives

- What is **Ensembl**?
- What type of data can you get in **Ensembl**?
- How to navigate the **Ensembl** browser **website**.
- Where to go for **help** and **documentation**.

Exploring the Ensembl genome browser

The screenshot shows the Ensembl genome browser homepage. At the top, there's a navigation bar with links: BLAST/BLAT, BioMart, Tools, Downloads, Help & Documentation, Blog, and Mirrors. A search bar is on the right with the text "Search all species...". Below the navigation bar, there's a main search area with a dropdown menu set to "All species" and a "Go" button. Below this, there's a section titled "Browse a Genome" with a description: "The Ensembl project produces genome databases for vertebrates and other eukaryotic species, and makes this information freely available online." It lists "Popular genomes" with icons for Human (GRCh37), Mouse (GRCm38), and Zebrafish (Zv9). There's also a section for "All genomes" with a dropdown menu to "Select a species" and a link to "View full list of all Ensembl species". Other species are available in Ensembl Pro! and Ensembl Genomes. To the right of the "Browse a Genome" section, there are several tiles for "ENCODE data in Ensembl", "Variant Effect Predictor", "Gene expression in different tissues", "Find SNPs and other variants for my gene", "Retrieve gene sequence", "Compare genes across species", "Use my own data in Ensembl", and "Learn about a disease or phenotype". On the far right, there's a "What's New in Release 73 (September 2013)" section with a list of updates, a "Latest blog posts" section with a list of posts, and a "Did you know...?" section with a link to "FAQs".

Why do we need genome browsers?

1977: 1st genome to be sequenced (5 kb)

2004: finished human sequence (3 Gb)

<http://training.ensembl.org/events>

Why do we need genome browsers?

<http://training.ensembl.org/events>

Ensembl- unlocking the code

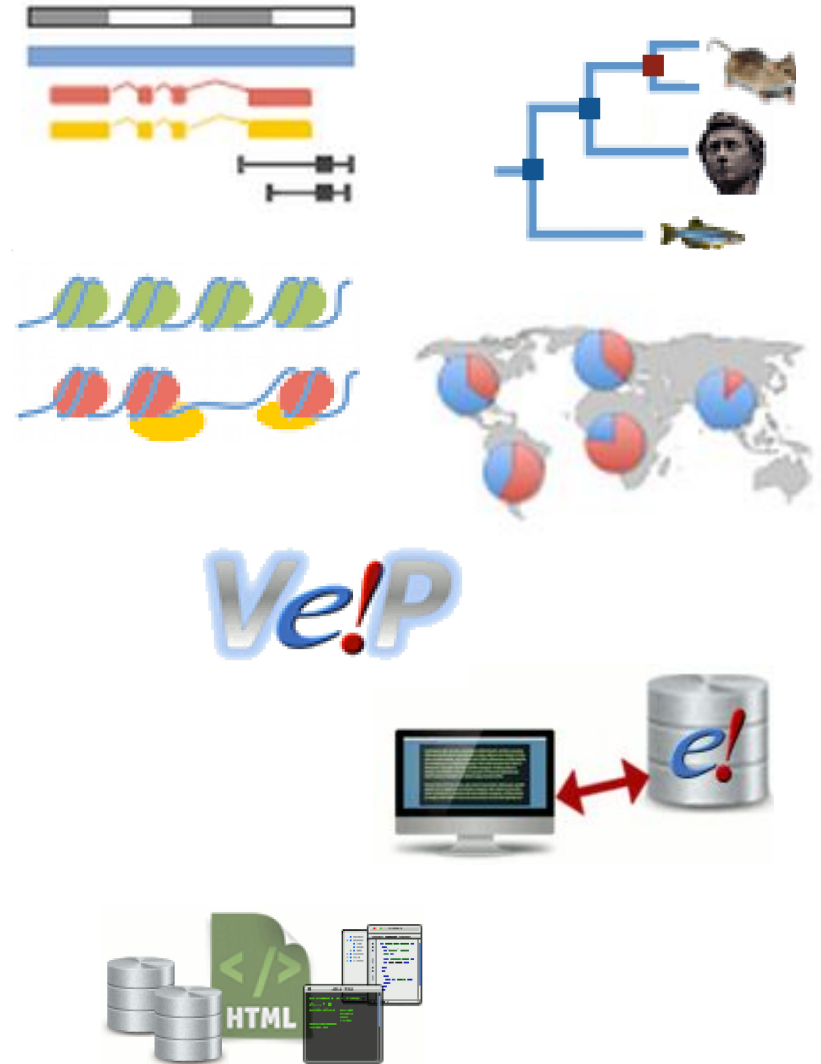

- Genomic assemblies - automated gene annotation
- Variation - Small and large scale sequence variation with phenotype associations
- Comparative Genomics - Whole genome alignments, gene trees
- Regulation - Potential promoters and enhancers, DNA methylation

<http://training.ensembl.org/events>

Ensembl Features

- Gene builds for ~300 species
- Variation, comparative genomics and regulatory data display
- Display of user data
- Tools for data processing, e.g VEP
- BioMart (data export)
- Programmatic access via the APIs
- Completely Open Source

<http://training.ensembl.org/events>

Ensembl- access to 300+ genomes

<http://training.ensembl.org/events>

Ensembl Genomes- expanding Ensembl

www.ensembl.org

- Vertebrates

<http://training.ensembl.org/events>

Human genome assemblies

- GRCh38 (aka hg38)
 - www.ensembl.org
 - Most up-to-date and supported
- GRCh37 (aka hg19)
 - Greater gap length than GRCh38
 - grch37.ensembl.org
 - Limited data and software updates
- NCBI36 (aka hg18)
 - 150,000 gaps
 - ncbi36.ensembl.org
 - No longer updated

<http://training.ensembl.org/events>

Questions?

<http://training.ensembl.org/events>

Hands on

- We're going to look at the Ensembl homepage and how to find information about the species and genome assemblies in Ensembl.
- There are more exercises than we have time for: pick and choose the ones most relevant to your work and you're welcome to finish them in your own time.

Exploring genomic locations: the Region in Detail view

Hands on

- We're going to look at a region of the human genome, **4:122868000-122946000**, and manipulate the view to see the data we're interested in.
- There are more exercises than we have time for: pick and choose the ones most relevant to your work and you're welcome to finish them in your own time.

transcript

Ensembl and Havana annotation

Automatic annotation

Manual annotation

<http://training.ensembl.org/events>

Automatic gene annotation

- Genome-wide determination using the Ensembl automated pipeline
- Predictions based on experimental (biological) data

<http://training.ensembl.org/events>

Biological Evidence

- **International Nucleotide Sequence databases**

- cDNAs
- ESTs
- RNAseq

GenBank

- **Protein sequence databases**

- Swiss-Prot: manually curated
- TrEMBL: unreviewed translations

- **Homologous sequences**

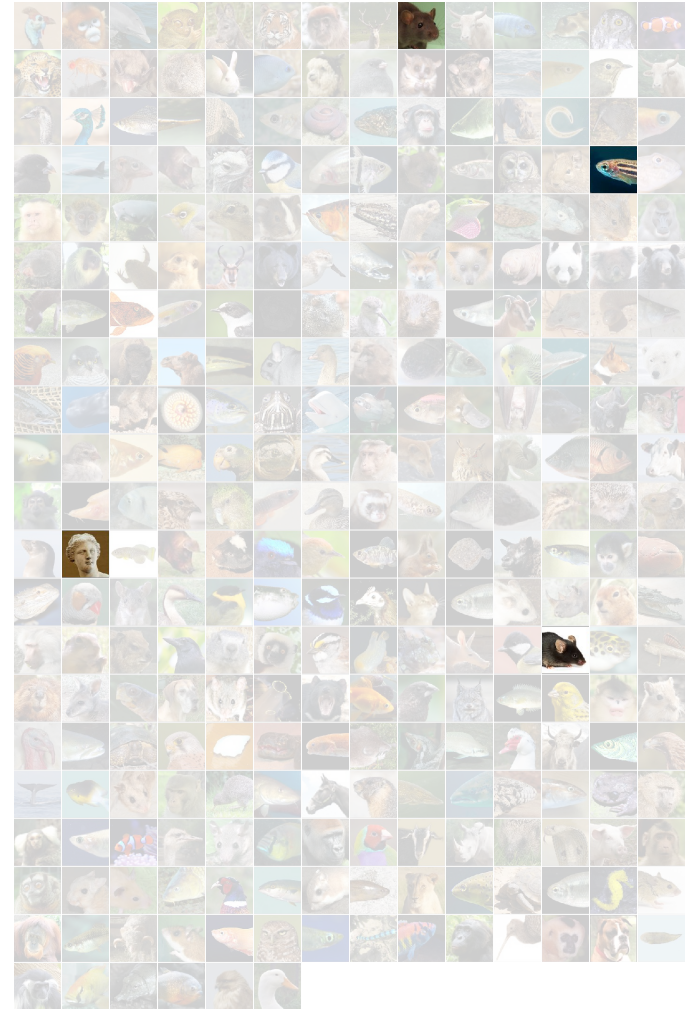

Infer genes from homology to other species

- predict genes in  by mapping cDNAs/proteins from  to the  genome.

<http://training.ensembl.org/events>

Manual gene annotation

- Gene determination on a case-by-case basis by a person
- Uses data from databases and papers:
 - INSDC databases
 - RNAseq
 - long read transcriptomic data
 - intron data
 - CAGE
 - PolyA-Seq
 - Mass Spec
 - ONT
 - publications

<http://training.ensembl.org/events>

Gene annotation: Manual

Benefit

Disadvantages

-
- | | |
|---|---------------|
| - More comprehensive | - Slower |
| - More genes and transcripts overall | - Small scale |
| - Require less evidence
(quality > thresholds) | |
| - More accurate for difficult regions: | |
| - UTRs | |
| - Splice sites | |
| - Single exon
transcripts | |
| - Exceptions
(i.e. immunoglobins) | |

Golden transcripts

- Identical annotation

*e!*Ensembl

havana
human and vertebrate analysis and annotation

- Higher confidence and quality

<http://training.ensembl.org/events>

- The GENCODE gene set is made up of:
 - The merged set of Ensembl automatically annotated genes and Havana manually annotated genes
- GENCODE is the default gene set used by gnomAD/ExAC, ENCODE, 1000 Genomes and other major projects.

MANE transcripts

- **M**atched **A**nnotation from the **N**CBI and **E**BI (MANE) project
- Biologically relevant transcript set with 100% identity between resources (including non-coding regions)
-  ~100% of human protein coding transcripts

Which transcript should I use?

-
- For non-human species a suffix is added:
MUS (*Mus musculus*) for mouse ENS**MUSG**###
DAR (*Danio rerio*) for zebrafish: ENS**DARG**###

http://www.ensembl.org/info/genome/stable_ids/index.html

<http://training.ensembl.org/events>

Hands on

- We're going to look at an Ensembl gene, *UQCRQ*, and find out information about it and its transcripts.
- There are more exercises than we have time for: pick and choose the ones most relevant to your work and you're welcome to finish them in your own time.

Why Gene Ontology (GO)?

Multiple terms for the same thing

Gene descriptions too specific

GO terms form a controlled vocabulary

GO:0045087 - innate immune response

Innate immune responses are defense responses mediated by germline encoded components that directly recognise components of potential pathogens.

Hands on

- We're going to look at an Ensembl gene, *UQCRQ*, and find out information about it and its transcripts.
- There are more exercises than we have time for: pick and choose the ones most relevant to your work and you're welcome to finish them in your own time.

Variation

EMBL-EBI 

e!

Outline

- Classification of variants
- Species and sources of variation
- Browsing variation data
 - Gene tab
 - Location tab
 - Variation tab
- Variant Effect Predictor

Variation types

1) Small scale in one or few nucleotides of a gene

- Small insertions and deletions (DIPs or indels)
- Single nucleotide polymorphism (SNP)

2) Large scale in chromosomal structure (structural variation)

- Copy number variations (CNV)
- Large deletions/duplications, insertions, translocations

<http://training.ensembl.org/events>

24 species with variation data

	Cat <i>Felis catus</i>	3.6 M
	Chicken <i>Gallus gallus</i>	24 M
	Chimpanzee <i>Pan troglodytes</i>	1.6 M
	Cow <i>Bos taurus</i>	104 M
	Dog <i>Canis lupus familiaris</i>	5.9 M
	Gibbon <i>Nomascus leucogenys</i>	1.1 M
	Goat <i>Capra hircus</i>	37 M
	Horse <i>Equus caballus</i>	21 M
	Human <i>Homo sapiens</i>	679 M
	Macaque <i>Macaca mulatta</i>	53 M
	Mouse <i>Mus musculus</i>	84 M

	Opossum <i>Monodelphis domestica</i>	1.1 M
	Orangutan <i>Pongo abelli</i>	10 M
	Pig <i>Sus scrofa</i>	67 M
	Platypus <i>Ornithorhynchus anatinus</i>	1.3 M
	Rat <i>Rattus norvegicus</i>	5 M
	Sheep <i>Ovis aries rambouillet</i>	61 M
	Sheep (texel) <i>Ovis aries</i>	61 M
	Tetraodon <i>Tetraodon nigroviridis</i>	902 K
	Turkey <i>Meleagris gallopavo</i>	9 K
	Zebra finch <i>Taeniopygia guttata</i>	1.7 M
	Zebrafish <i>Danio rerio</i>	17 M

<http://training.ensembl.org/events>

Species with variation data in Ensembl Genomes

<http://training.ensembl.org/events>

Where does the data come from?

The Ensembl variation process

<http://www.ensembl.org/info/genome/variation/index.html>

<http://training.ensembl.org/events>

Ensembl variation process: Import

Import variant data from
publicly available archives
and data repositories

dbSNP
Short Genetic Variations

*DGV*archive

EVA

COSMIC

The core of COSMIC, an expert-curated database of somatic mutations

Cancer Gene Census

A catalogue of genes with mutations that are causally implicated in cancer

http://www.ensembl.org/info/genome/variation/species/sources_documentation.html

<http://training.ensembl.org/events>

Ensembl variation process: QC

- Mapping to reference assembly
 - GRCh37 → GRCh38
- Checks on alleles
- Checks for IUPAC ambiguity codes

Excluding 'suspect' variants

http://www.ensembl.org/info/genome/variation/prediction/variant_quality.html#quality_control

<http://training.ensembl.org/events>

Ensembl variation process: Linked data

Import 'value added' data

- Allele frequencies
- Phenotype/disease
- Publication data

<http://training.ensembl.org/events>

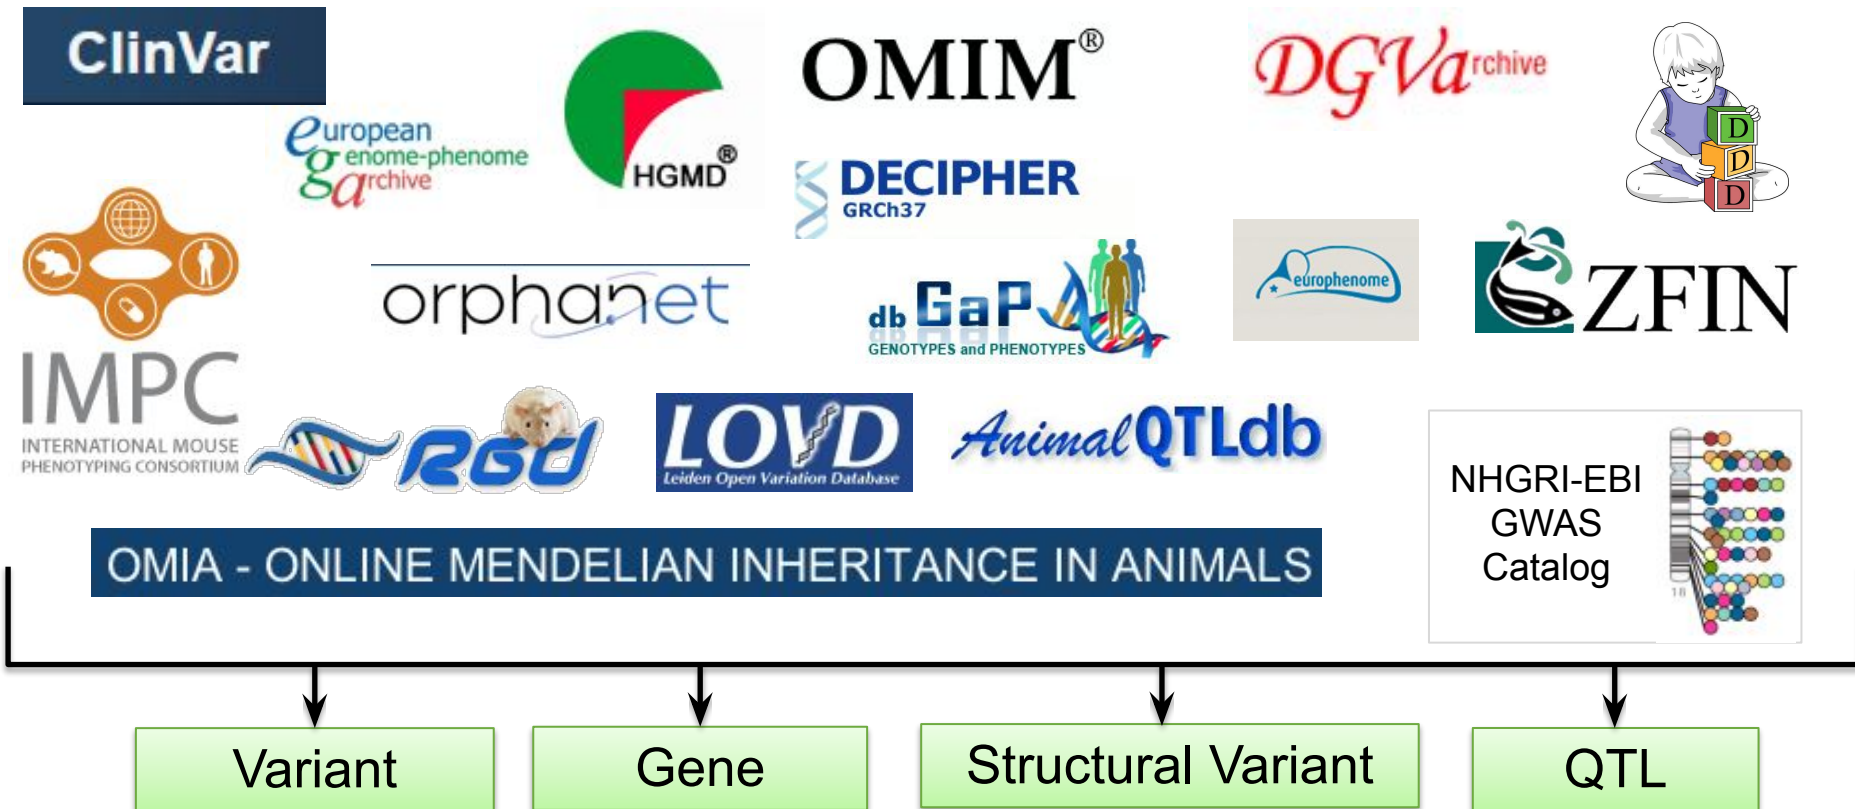

Linked data: Allele Frequencies

- 1000 Genomes: worldwide healthy WGS
- gnomAD: mixed disease/healthy WGS and exomes, skewed to most studied populations (included ExAC)
- UK10K: UK-wide disease exomes
- TOPMed: disease WGS
- NCBI Allele Frequency Aggregator (ALFA)

<http://training.ensembl.org/events>

Phenotype and Disease Data

Attributes types held for phenotype features include:

- clinical significance reported by ClinVar
- inheritance type
- reported genes /variants
- risk allele
- p-value
- odds ratio
- beta coefficient

<http://training.ensembl.org/events>

Ensembl variation process: Analysis

Ensembl predicts:

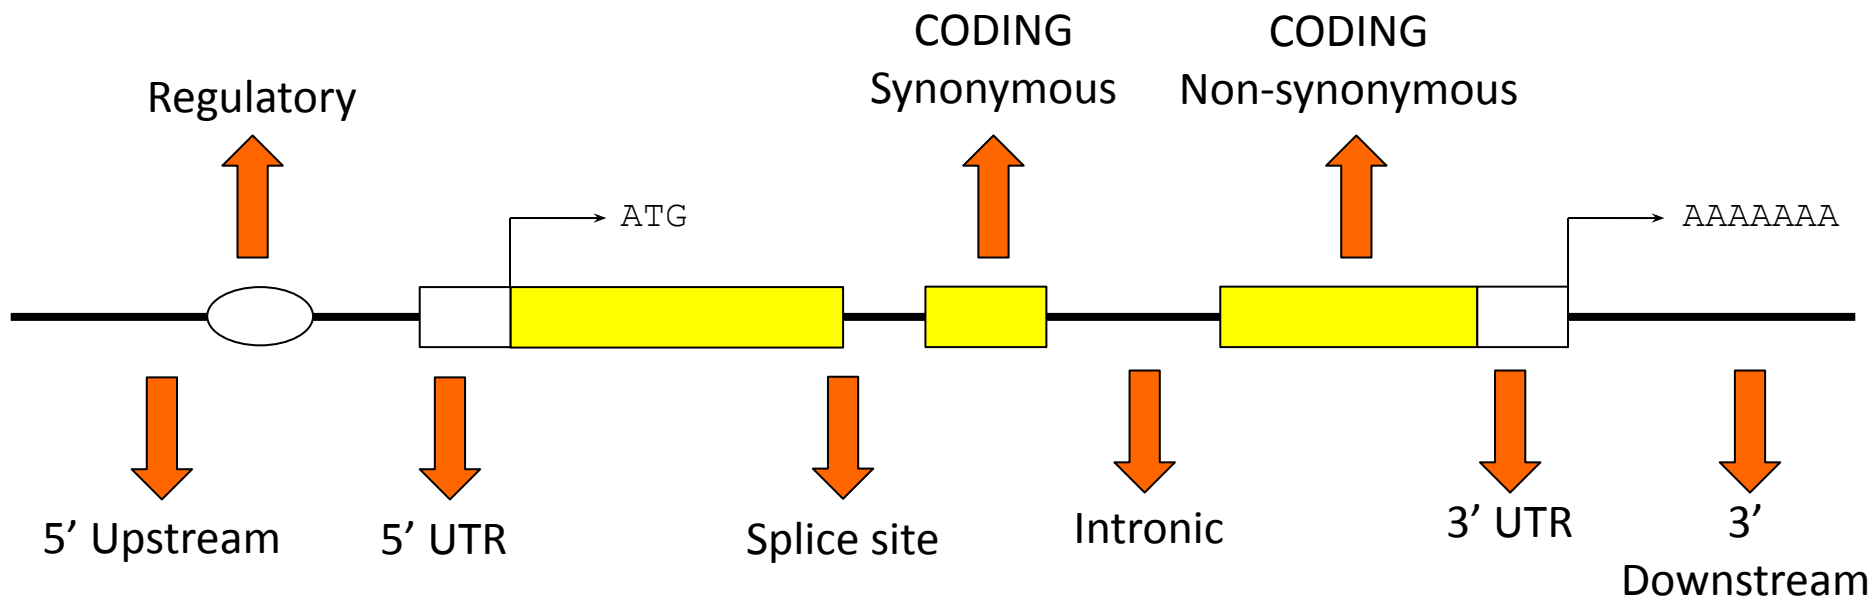

- Variant consequences
- Protein function prediction
- Linkage disequilibrium data
- Variant conservation across species

<http://www.ensembl.org/info/genome/variation/prediction/index.html>

<http://training.ensembl.org/events>

Variation consequences

Consequence terms

* SO term	SO description	SO accession	Old Ensembl term
transcript_ablation	A feature ablation whereby the deleted region includes a transcript feature	SO:0001893	Transcript ablation
splice_donor_variant	A splice variant that changes the 2 base region at the 5' end of an intron	SO:0001575	Essential splice site
splice_acceptor_variant	A splice variant that changes the 2 base region at the 3' end of an intron	SO:0001574	
stop_gained	A sequence variant whereby at least one base of a codon is changed, resulting in a premature stop codon, leading to a shortened transcript	SO:0001587	Stop gained
frameshift_variant	A sequence variant which causes a disruption of the translational reading frame, because the number of nucleotides inserted or deleted is not a multiple of three	SO:0001589	Frameshift coding
stop_lost	A sequence variant where at least one base of the terminator codon (stop) is changed, resulting in an elongated transcript	SO:0001578	Stop lost
initiator_codon_variant	A codon variant that changes at least one base of the first codon of a transcript	SO:0001582	Non synonymous coding
inframe_insertion	An inframe non synonymous variant that inserts bases into in the coding sequence	SO:0001821	
inframe_deletion	An inframe non synonymous variant that deletes bases from the coding sequence	SO:0001822	
missense_variant	A sequence variant, that changes one or more bases, resulting in a different amino acid sequence but where the length is preserved	SO:0001583	
transcript_amplification	A feature amplification of a region containing a transcript	SO:0001889	Transcript amplification
splice_region_variant	A sequence variant in which a change has occurred within the region of the splice site, either within 1-3 bases of the exon or 3-8 bases of the intron	SO:0001630	Splice site
incomplete_terminal_codon_variant	A sequence variant where at least one base of the final codon of an incompletely annotated transcript is changed	SO:0001626	Partial codon
synonymous_variant	A sequence variant where there is no resulting change to the encoded amino acid	SO:0001819	Synonymous coding
stop_retained_variant	A sequence variant where at least one base in the terminator codon is changed, but the terminator remains	SO:0001567	
coding_sequence_variant	A sequence variant that changes the coding sequence	SO:0001580	Coding unknown
mature_miRNA_variant	A transcript variant located with the sequence of the mature miRNA	SO:0001620	Within mature miRNA
5_prime_UTR_variant	A UTR variant of the 5' UTR	SO:0001623	5prime UTR
3_prime_UTR_variant	A UTR variant of the 3' UTR	SO:0001624	3prime UTR
intron_variant	A transcript variant occurring within an intron	SO:0001627	Intronic
NMD_transcript_variant	A variant in a transcript that is the target of NMD	SO:0001621	NMD transcript
non_coding_exon_variant	A sequence variant that changes non-coding exon sequence	SO:0001792	Within non coding gene
nc_transcript_variant	A transcript variant of a non coding RNA	SO:0001619	
upstream_gene_variant	A sequence variant located 5' of a gene	SO:0001631	Upstream
downstream_gene_variant	A sequence variant located 3' of a gene	SO:0001632	Downstream
TFBS_ablation	A feature ablation whereby the deleted region includes a transcription factor binding site	SO:0001895	Tfbs ablation
TFBS_amplification	A feature amplification of a region containing a transcription factor binding site	SO:0001892	Tfbs amplification
TF_binding_site_variant	A sequence variant located within a transcription factor binding site	SO:0001782	Regulatory region
regulatory_region_variant	A sequence variant located within a regulatory region	SO:0001566	
regulatory_region_ablation	A feature ablation whereby the deleted region includes a regulatory region	SO:0001894	Regulatory region ablation
regulatory_region_amplification	A feature amplification of a region containing a regulatory region	SO:0001891	Regulatory region amplification
feature_elongation	A sequence variant that causes the extension of a genomic feature, with regard to the reference sequence	SO:0001907	Feature elongation
feature_truncation	A sequence variant that causes the reduction of a genomic feature, with regard to the reference sequence	SO:0001906	Feature truncation
intergenic_variant	A sequence variant located in the intergenic region, between genes	SO:0001628	Intergenic

http://www.ensembl.org/info/docs/variation/predicted_data.html

<http://training.ensembl.org/events>

Missense variants- pathogenicity

Various algorithms score or rank changes in amino acid sequence based on:

- How well conserved the protein is
 - The chemical change in the amino acid position
 - 3D structure and domains
-
- These are predictions, not facts
 - A prediction will never be as good as experimental validation

Missense variants- pathogenicity

SIFT

PolyPhen2

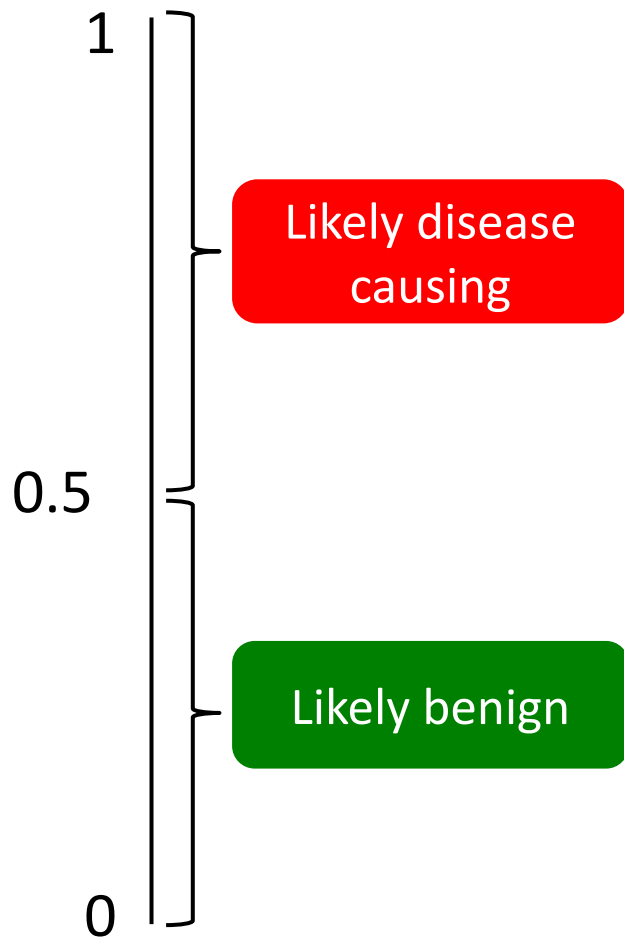

CADD

<http://training.ensembl.org/events>

Missense variants- pathogenicity

REVEL

MetaLR

Mutation Assessor

<http://training.ensembl.org/events>

Reference alleles

BL

AL

CM

IM

BL102

AL476

CM553

IM768

BL102

AGTCGTAGCTAGC **T**AGGCCATAGGCGA

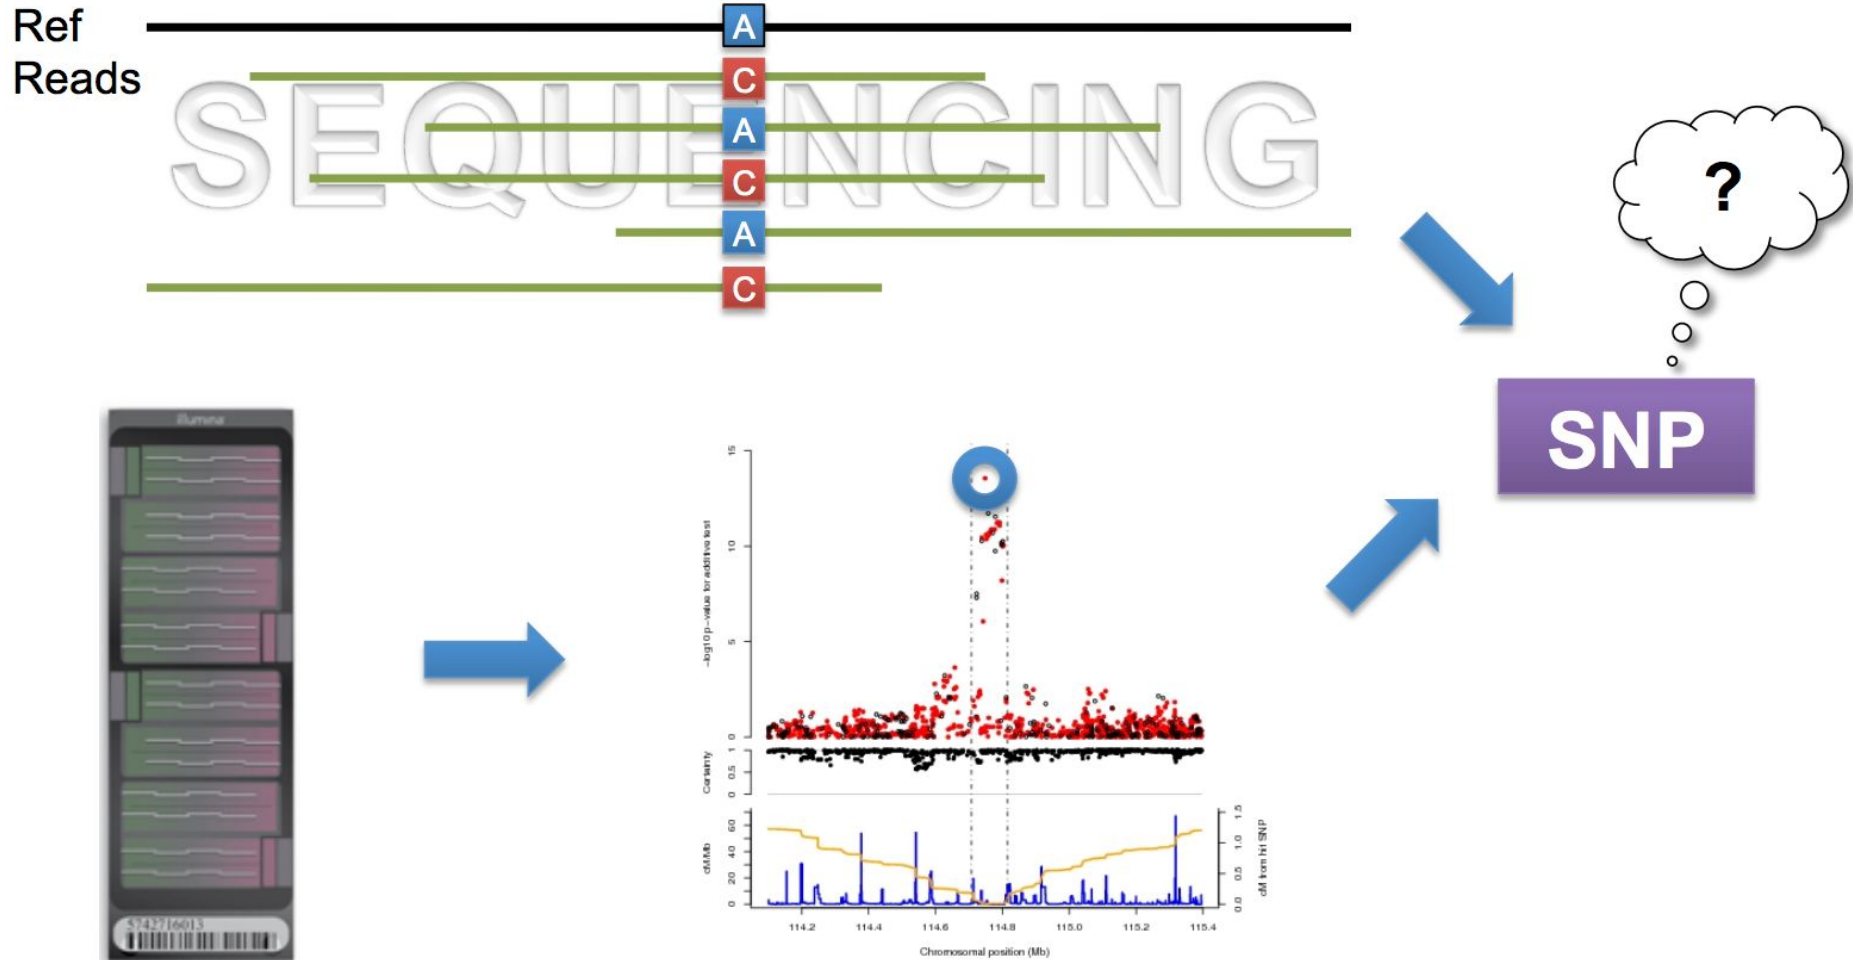

Frequency T = 0.05, frequency G = 0.95
G is the allele in all primates
T causes disease susceptibility

T is allele in the contig used
∴ T is the reference allele
∴ G is the alternate allele
∴ Alleles are T/G

Hands on

- We're going to look at a gene *MCM6* to find variants in the gene.
 - We will look at the region of *MCM6* to find variants in the region.
 - We will look at a variant *rs4988235* to find more information about it.
-
- There are more exercises than we have time for: pick and choose the ones most relevant to your work and you're welcome to finish them in your own time.

What is the VEP for?

<http://training.ensembl.org/events>

What can I do with the VEP?

A tool to predict and annotate the functional consequences of variants
(SNPs, insertions, deletions, CNVs or structural variants)

Data input

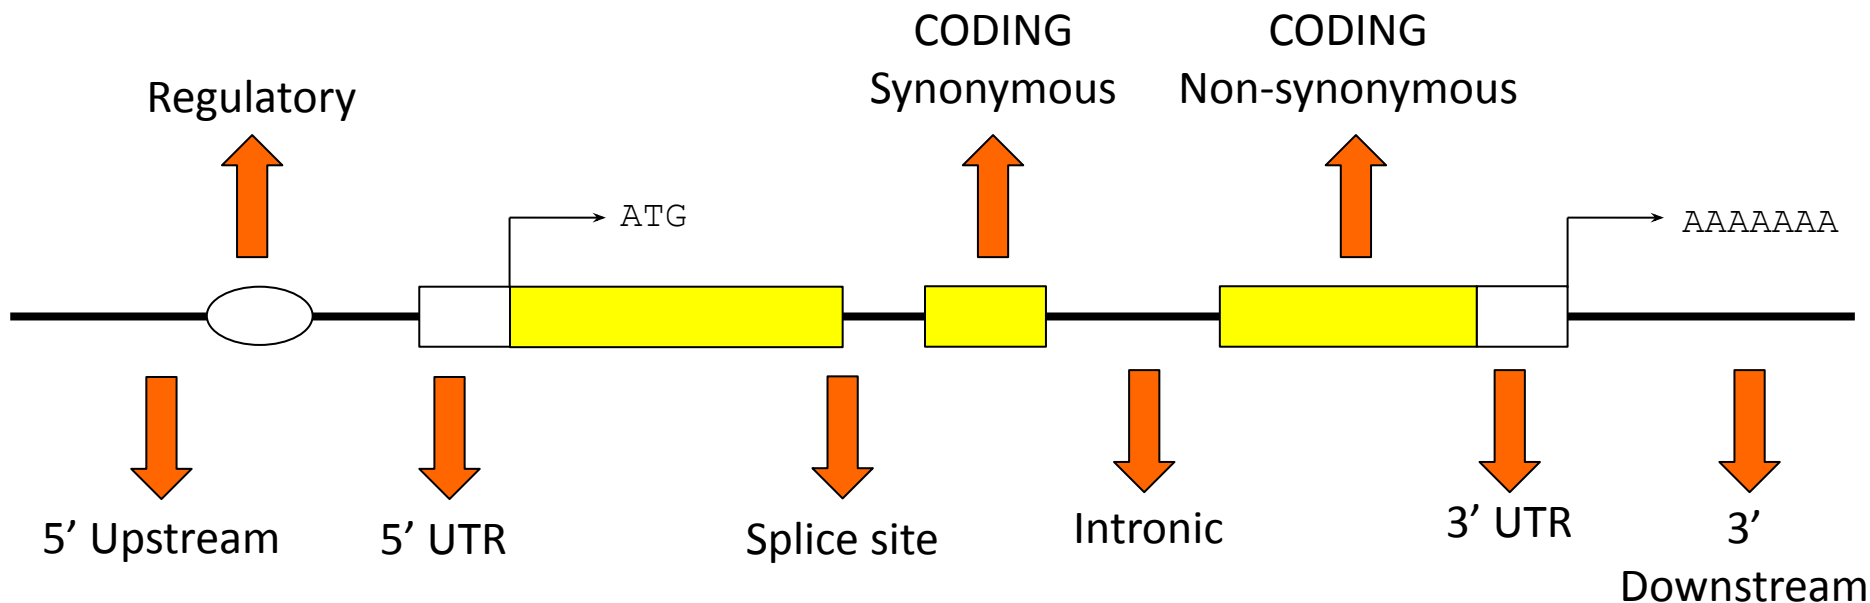

- Variant coordinates
- VCF
- HGVS
- Variant IDs
- SPDI

- Affected gene, transcript and protein sequence
- Pathogenicity 
- Frequency data 
- Regulatory consequences
- Splicing consequences
- Literature citations 

<http://training.ensembl.org/events>

Variation consequences

SO term	SO description	SO accession	Old Ensembl term
transcript_ablation	A feature ablation whereby the deleted region includes a transcript feature	SO:0001893	Transcript ablation
splice_donor_variant	A splice variant that changes the 2 base region at the 5' end of an intron	SO:0001575	Essential splice site

splice_region_variant	A sequence variant in which a change has occurred within the region of the splice site, either within 1-3 bases of the exon or 3-8 bases of the intron	SO:0001630	Splice site
incomplete_terminal_codon_variant	A sequence variant where at least one base of the final codon of an incompletely annotated transcript is changed	SO:0001626	Partial codon
synonymous_variant	A sequence variant where there is no resulting change to the encoded amino acid	SO:0001819	Synonymous coding
stop_retained_variant	A sequence variant where at least one base in the terminator codon is changed, but the terminator remains	SO:0001567	
coding_sequence_variant	A sequence variant that changes the coding sequence	SO:0001580	Coding unknown
mature_miRNA_variant	A transcript variant located with the sequence of the mature miRNA	SO:0001620	Within mature miRNA
5_prime_UTR_variant	A UTR variant of the 5' UTR	SO:0001623	5prime UTR
3_prime_UTR_variant	A UTR variant of the 3' UTR	SO:0001624	3prime UTR
intron_variant	A transcript variant occurring within an intron	SO:0001627	Intronic
NMD_transcript_variant	A variant in a transcript that is the target of NMD	SO:0001621	NMD transcript
non_coding_exon_variant	A sequence variant that changes non-coding exon sequence	SO:0001792	Within non coding gene
nc_transcript_variant	A transcript variant of a non coding RNA	SO:0001619	
upstream_gene_variant	A sequence variant located 5' of a gene	SO:0001631	Upstream
downstream_gene_variant	A sequence variant located 3' of a gene	SO:0001632	Downstream

Use the VEP

Variant Effect Predictor

Web interface

- Point-and-click interface
- Suits smaller volumes of data

[Documentation](#)

[Launch the web interface](#)

Standalone perl script

- More options, more flexibility
- For large volumes of data

[Documentation](#)

[Download latest version](#)

REST API

- Language-independent API
- Simple URL-based queries
- GET single variants, POST many

[Documentation](#)

<http://www.ensembl.org/info/docs/tools/vep/index.html>

<http://training.ensembl.org/events>

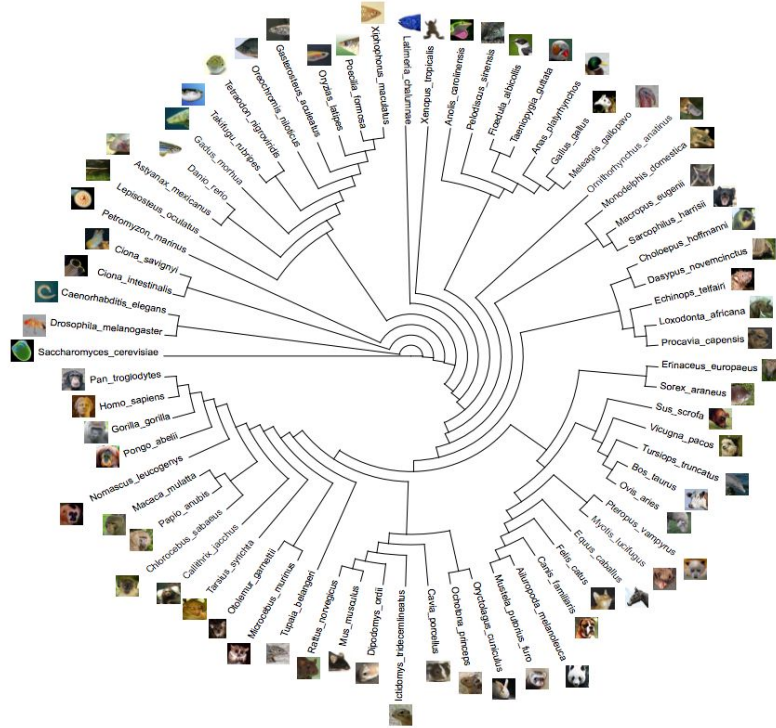

Hands on

We have identified five variants on human chromosome nine, an A deletion at 128328461, C->A at 128322349, C->G at 128323079, G->A at 128322917 and C->A at 128203516.

We will use the **Ensembl VEP** to determine:

- Whether my variants have already been annotated in Ensembl
- What genes are affected by my variants?
- Do any of my variants affect gene regulation?

Comparative Genomics

Overview of the talk

- Comparative genomics: applications and species
- Gene trees
- Homology predictions
- Whole genome alignments
 - pairwise
 - multiple
- Shared synteny

Applications of Comparative Genomics

Comparative genomics allows us to understand:

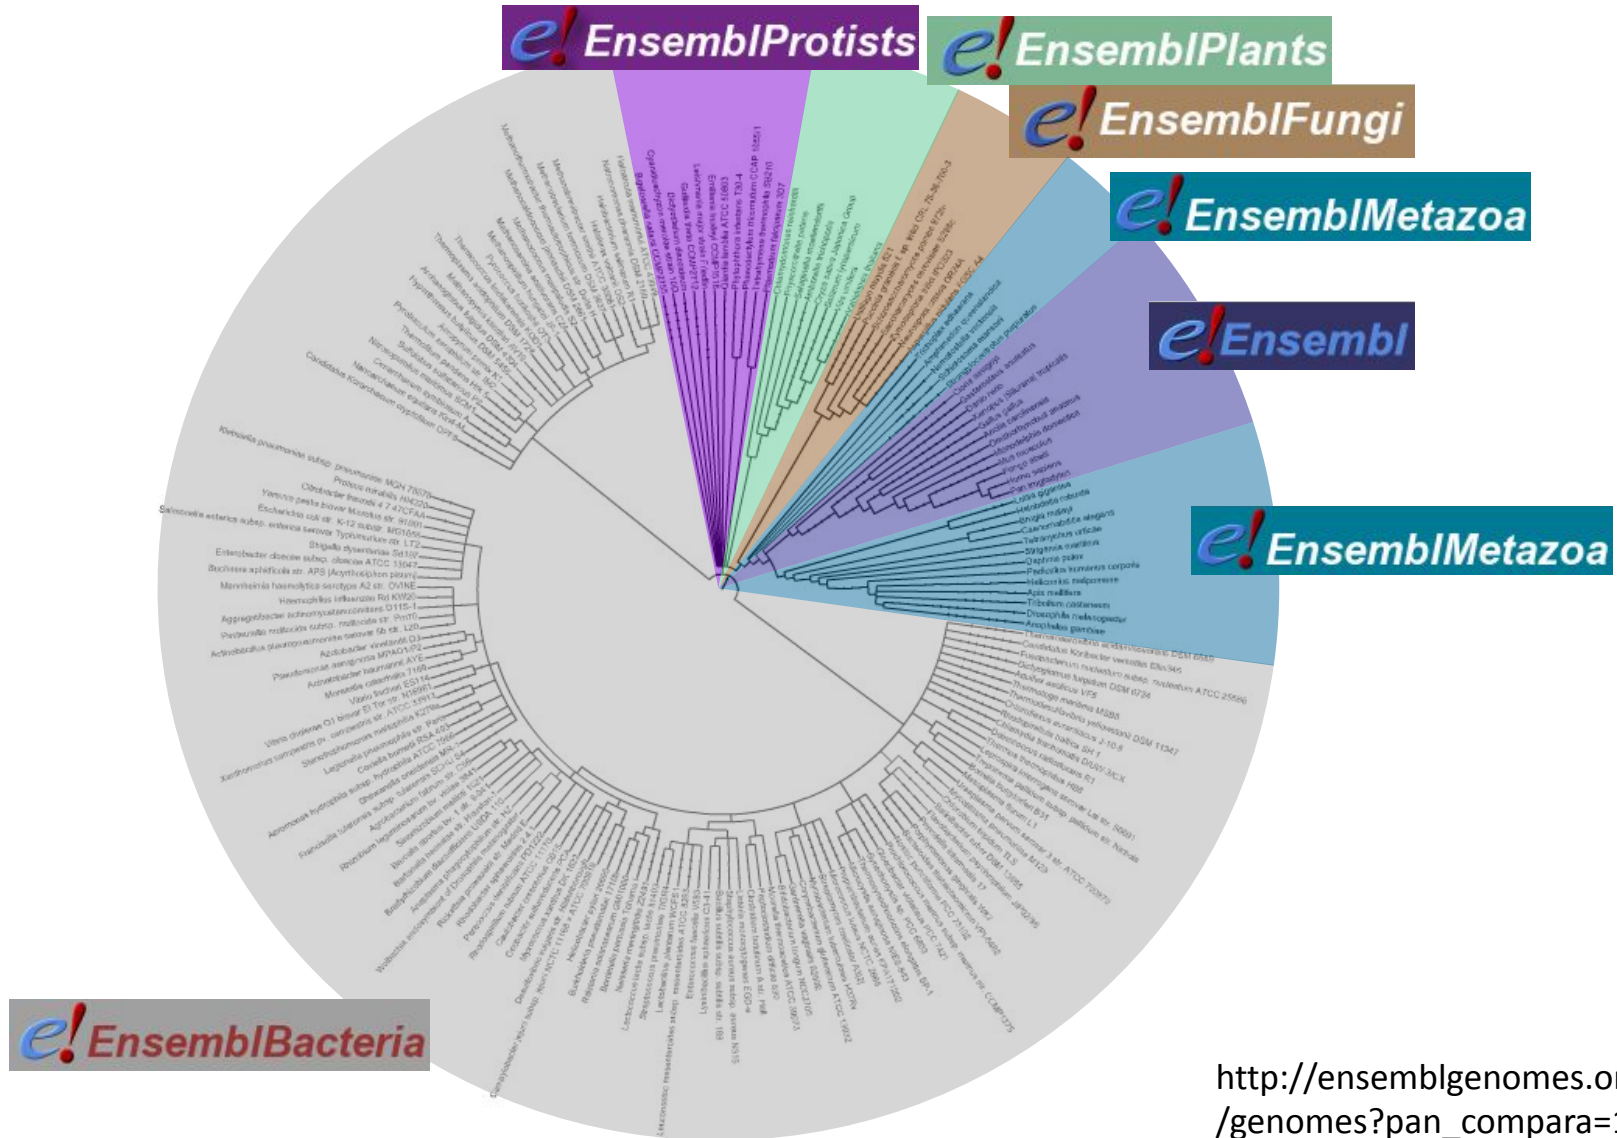

- vertebrate evolution
- differences between species at the genome level
- gene function based on homology
- the distribution of highly conserved regions

Comparative analysis by taxa

<http://training.ensembl.org/events>

Pan-taxonomic compara

http://ensemblgenomes.org/info/genomes?pan_compara=1

<http://training.ensembl.org/events>

Pan-taxonomic compara

Gene trees

- Based on protein alignments
- Representative protein of each Ensembl gene
- Clustering, Blast, multiple alignments
- Reconciliation with species tree
- Orthologue/Parologue inference

http://www.ensembl.org/info/docs/compara/homology_method.html

<http://training.ensembl.org/events>

Homology relationships

Paralogues

Genes emerged through a duplication event

eg

c1 and c2

h1 and h2

Orthologues

Genes emerged through a speciation event

eg

c1 and h1

h2 and m

c2 and m

Hands on

- We're going to look at a gene *BRCA2* to find homologues.

Whole genome alignments

- To identify highly conserved regions
 - sequences that evolve slowly
 - regions likely to be functional
 - both coding and non-coding sequences
- To spot trouble gene predictions
- To define syntenic regions
- Types: pairwise *versus* multiple

Pairwise alignments

- Pairwise alignments with BLASTZ (older) LASTZ-net (newer)

- Human: everything
- Model organisms: related species
- Agricultural mammals: each other

<http://www.ensembl.org/info/genome/compara/analyses.html>

<http://training.ensembl.org/events>

Multiple alignments

- EPO (Enredo-Pecan-Ortheus) analysis
 - fish, sauropsids, eutherian mammals, primates

- EPO-extended analysis (allows fragmented assemblies)
 - fish, sauropsids, eutherian, primates, pig breeds (+ other agricultural mammals)
- Mercator-Pecan analysis
 - amniota vertebrates (mammals+birds)
- Cactus
 - Murinae

http://www.ensembl.org/info/genome/compara/multiple_genome_alignments.html

<http://training.ensembl.org/events>

Hands on

- We will look at a human genomic region **2:176087000-176202000** which contains the *HoxD* cluster to find alignments and conservation regions.
- There are more exercises than we have time for: pick and choose the ones most relevant to your work and you're welcome to finish them in your own time.

Regulation of gene expression

Regulation

- Annotation of the genome with functional regulatory elements; promoters, enhancers, repressors
- Epigenetic marks
 - Histone modifications
 - DNA methylation
- Transcription Factor binding
- RNA Pol binding
- Predicted open/closed chromatin
 - DNase I sensitivity

<http://training.ensembl.org/events>

One genome - many cell types

Essentially all cells of an individual share

- the same genome
- the same genes

But...

there are hundreds of **different cell types** with a clearly **distinct phenotype**

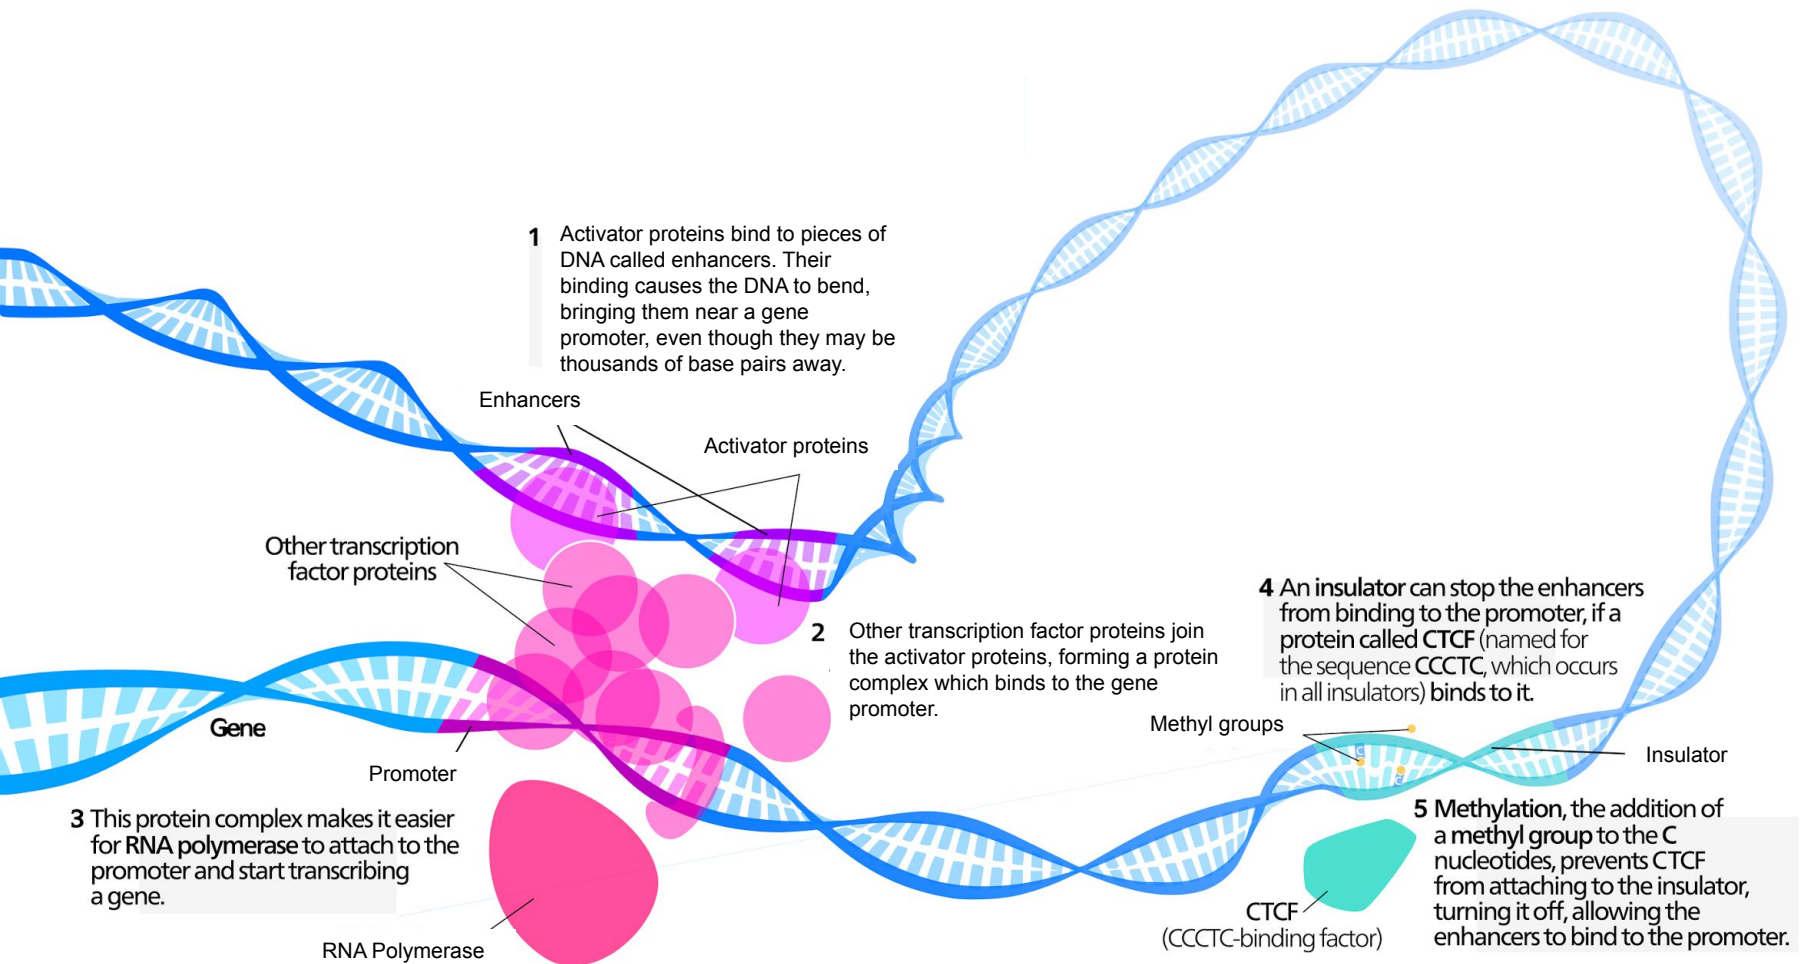

Difference?

Different gene expression profiles = different epigenomes*

*epigenome = cell type (sometimes cell line) = tissue type

<http://training.ensembl.org/events>

Layers of transcriptional regulation

The Ensembl Regulatory Build

EMBL-EBI 

e!

What data does Ensembl generate?

Step 1: The processed **data** is imported from the various sources.

Step 2: Data processed to **predict the positions** of regulatory **features**
(i.e. promoters, promoter flanking regions, enhancers, CTCF binding sites, transcription factor binding sites & open chromatin)

Step 3: The **activity** of these features is predicted in different cell types
(i.e. active, poised, repressed, inactive, unknown)

Step 4: Display in the genome browser.

ensembl.org/info/genome/funcgen/regulatory_build.html
<http://training.ensembl.org/events>

Where does the data come from?

Species	Data source	Assay types	Epigenomes
	 	<ul style="list-style-type: none"> - ChIP-seq (histone mods) - TF binding sites - RNAPol - DNase sensitivity (open chromatin) 	48 cultured cell lines
		<ul style="list-style-type: none"> - ChIP-seq (histone mods) - TF binding sites - RNAPol - DNase sensitivity (open chromatin) 	8 cultured cell lines
		<ul style="list-style-type: none"> - ChIP-seq (histone mods) - DNase sensitivity (open chromatin) 	20 primary cells from haematopoietic cell lineage (direct from human cells)

ensembl.org/info/genome/funcgen/regulation_sources.html
<http://training.ensembl.org/events>

Step 1: Raw data & peak calling

<http://training.ensembl.org/events>

Step 2: Predicting feature positions

known promoter

known promoter

known promoter

<http://training.ensembl.org/events>

Segmentation

<http://training.ensembl.org/events>

Step 3: Predicting cell type activity

<http://training.ensembl.org/events>

Step 3: Predicting cell type activity

<http://training.ensembl.org/events>

Step 4: View in genome browser

Regulation Legend

CTCF
Motif feature

Promoter Flank
Activity in epigenome: Inactive

[Link to example page](http://training.ensembl.org/events)
<http://training.ensembl.org/events>

What does Ensembl not do?

We **do not**:

- Link regulatory features to genes
 - We allow you see the location of features.
- Link regulatory features to gene expression.
 - We have cell-line specific regulation data and tissue specific expression data.

You are required to make your own inferences about this data.

Regulatory data is incredibly complex and still in relative infancy.

There is no comprehensive database of regulation data...yet!

<http://training.ensembl.org/events>

Other regulatory resources in Ensembl

- Human and mouse  
 - VISTA elements (enhancers)
 - TarBase miRNA targets
- Human only 
 - Fantom TSS & enhancers
 - GTEX eQTLs
- Methylation (WGBS/RRBS) data from ENCODE
- Microarray probe mapping to transcripts

Future directions...

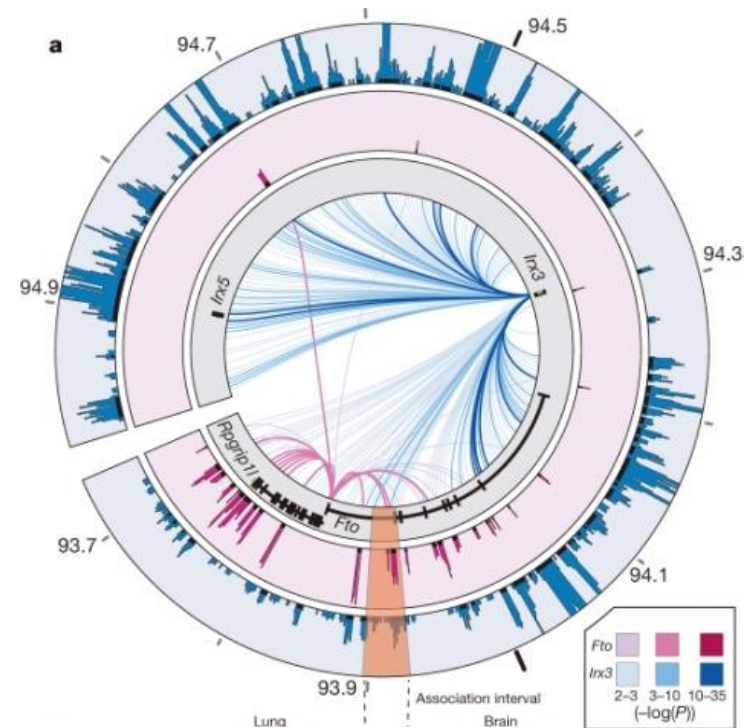

Zebrafish Genome Biology
CSIR Institute of Genomics & Integrative Biology

<http://training.ensembl.org/events>

Future directions...

Using eQTL & Hi-C to link regulatory regions to genes

Kilpeläinen TO et al., Nat Genet. 2011 Jun 26;43(8):753-60.
Smemo S et al. Nature. 2014 Mar 20;507(7492):371-5.

<http://training.ensembl.org/events>

Hands on

- We're going to look at the region of a gene *KPNA2* to find regulatory features and explore what cells types they are active in and what evidence there is to show this.
- There are more exercises than we have time for: pick and choose the ones most relevant to your work and you're welcome to finish them in your own time.

Data Mining with BioMart

Outline of this session

- What is BioMart?
- The principle: 4 steps
- Demo and Exercises

What is BioMart?

- A tool in your browser:
 - Export Ensembl data with no programming required
 - Build queries with a few mouse clicks
 - Generates customisable datatables and files

<http://training.ensembl.org/events>

Why use BioMart?

For things that would be time consuming/ difficult
with the Ensembl browser

- Query multiple things (gene/ variants) at once:
 - ID conversions
 - Gene locations
 - Download sequences
- Export large amounts of data

Where to find BioMart

- www.ensembl.org/biomart/martview

- metazoa.ensembl.org/biomart/martview

<http://training.ensembl.org/events>

Availability

Ensembl

Ensembl Plants

Ensembl Fungi (some exceptions)

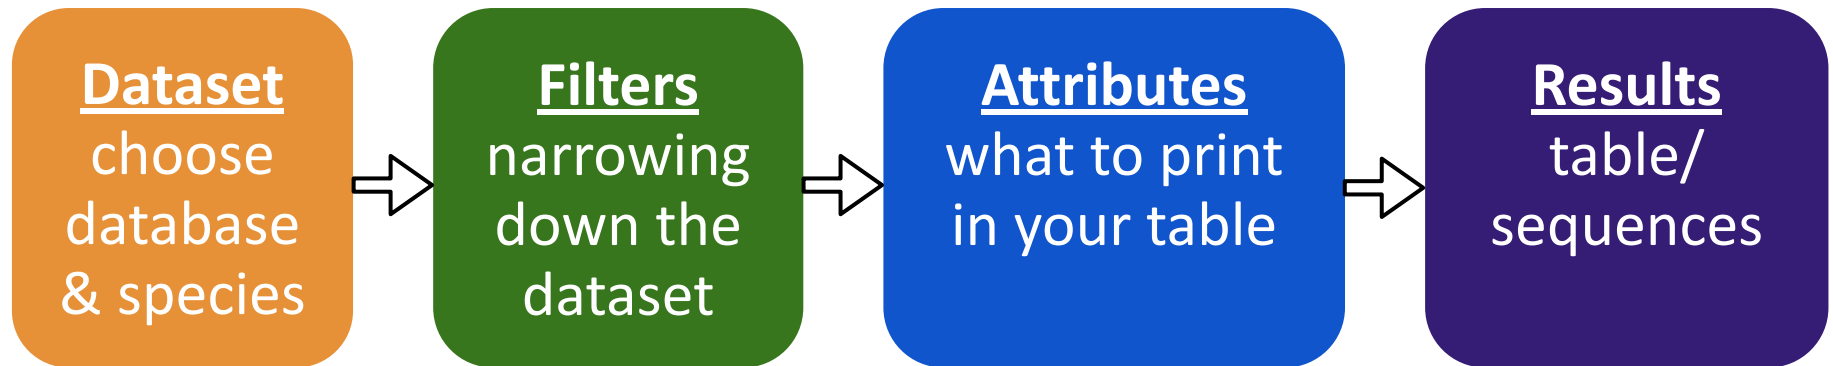

Ensembl Metazoa

Ensembl Protists (some exceptions)

<http://training.ensembl.org/events>

How do I use BioMart?

The 4 steps

<http://training.ensembl.org/events>

Step 1: Dataset

- Define the database that you want to search with your filters
 - Genes, Variation, Regulation
- Define the species

Step 2: Filters

Define a (large) set of genes/variants by combinations of parameters, eg:

- A region
- A list of IDs
- Function (GO term)
- Phenotypes

Step 3: Attributes

Define the data you want for that set, e.g:

- IDs
- Features
- Sequences
- Orthologues/Paralogues

Step 4: Results

View and download the datatable in a number of formats:

- html
- tsv
- csv
- xls
- fasta

biomaRt

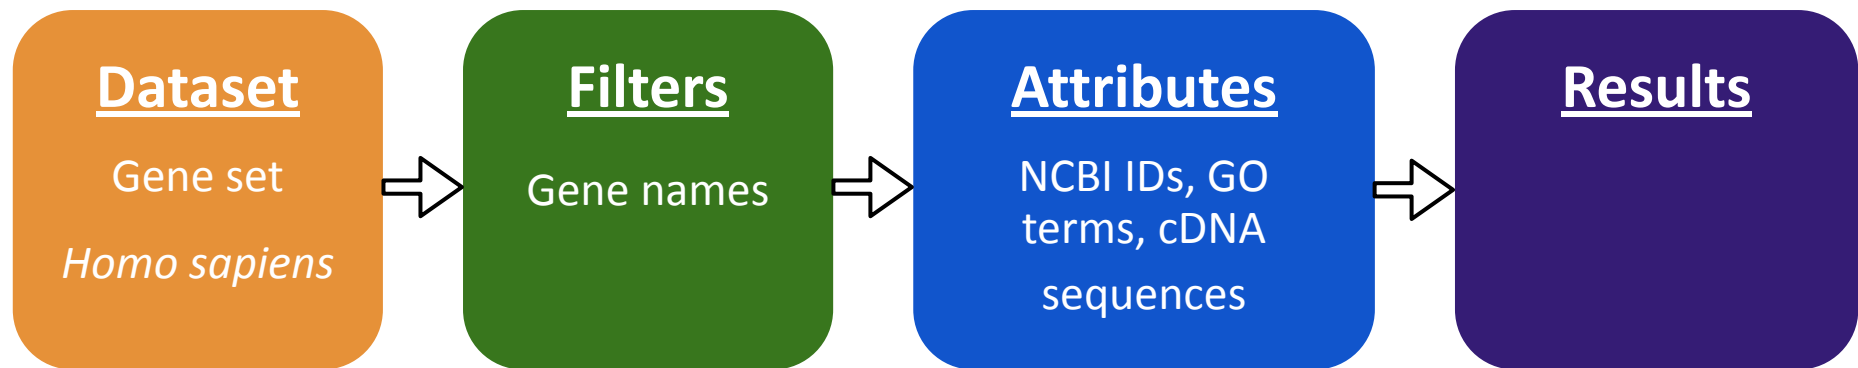

The screenshot shows the Bioconductor website. At the top left is the Bioconductor logo with the text "OPEN SOURCE SOFTWARE FOR BIOINFORMATICS". To the right is a teal navigation bar with links: Home, Install, Help, Developers, and About. A search bar is also present. Below the navigation bar, the breadcrumb trail reads "Home » Bioconductor 3.0 » Software Packages » biomaRt". The main heading is "biomaRt" in green. Below it, the text reads "Interface to BioMart databases (e.g. Ensembl, COSMIC, Wormbase and Gramene)". A sub-heading states "Bioconductor version: Release (3.0)". The main text describes the package's purpose: "In recent years a wealth of biological data has become available in public data repositories. Easy access to these valuable data resources and firm integration with data analysis is needed for comprehensive bioinformatics data analysis. biomaRt provides an interface to a growing collection of databases implementing the BioMart software suite (http://www.biomart.org). The package enables retrieval of large amounts of data in a uniform way without the need to know the underlying database schemas or write complex SQL queries. Examples of BioMart databases are Ensembl, COSMIC, Uniprot, HGNC, Gramene, Wormbase and dbSNP mapped to Ensembl. These major databases give biomaRt users direct access to a diverse set of data and enable a wide range of powerful online queries from gene annotation". On the right side, there is a "Workflows »" section listing common Bioconductor workflows, including: Oligonucleotide Arrays, High-throughput Sequencing, Counting Reads for Differential Expression (parathyroidSE vignette), Annotation, Annotating Variants, Annotating Ranges, Flow Cytometry and other assays, Candidate Binding Sites for Known Transcription Factors, and Cloud-enabled cis-eQTL search and annotation.

- Bioconductor provides tools for the analysis and comprehension of high-throughput genomic data using R statistical programming language.
- Package for Biomart called BiomaRt :
<http://www.bioconductor.org/packages/release/bioc/html/biomaRt.html>
- Easy to install in R :
 - `source("http://bioconductor.org/biocLite.R")`
 - `biocLite("biomaRt")`
- Documentation: <http://www.bioconductor.org/packages/release/bioc/vignettes/biomaRt/inst/doc/biomaRt.pdf>

<http://training.ensembl.org/events>

Hands on

- We're going to look at a set of six *Homo sapiens* genes *ESPN*, *MYH9*, *USH1C*, *CISD2*, *THRB* and *BRCA2* and find out:
 - Their NCBI IDs
 - Their function via GO terms
 - Their cDNA sequences

Hands on

Feedback

training.ensembl.org/events

<http://training.ensembl.org/events>

Wrap-up

Ensembl is a genome browser which integrates:

- gene annotation
- variation
- regulation
- comparative genomics

<http://training.ensembl.org/events>

How is all this data organised?

- Ensembl browser sites
 - Main website, Ensembl Genomes, GRCh37, *Archive!*
- BioMart 'DataMining tool'
- Ensembl Database (open source)
 - Perl-API, REST API, MySQL
- FTP download site
 - <http://www.ensembl.org/info/data/ftp/index.html>

<http://training.ensembl.org/events>
